Experience In Project

In fact, the relevant project experience for your own major is some of the final project experience in the school courseThe asp.net web development and design course has participated in the team making an asp chat room pageThe software collaborative design course is designed to participate in the front end of an online ordering systemThe software testing technology and software quality courses have used loadrunner to test simulated online airline systems.Order your meals onlineIn the analysis of the requirements of the project, the main responsibility is to obtain the requirements information of the system through various channels (via network inquiry, offline questionnaire survey, etc.). The midpoint design of the front end of the system and most of the system's front and rear interaction features are designed and coded. The latter is mainly responsible for the front end of the project, the functional optimization of the system and the improvement of user experience.Using github's SVN service, which is a student course site, uploads the web page with dreamweaver and USES the layout of div + CSS.
